

January 2010

ComSec International chose Smiths Detection because of their world-class technology and trusted name throughout the security industry. We added to our screening arsenal 3 of Smiths Detection's HI-SCAN 100100T-2is X-Ray cargo screeners along with 2 IONSCAN 500DT systems, which is the latest Explosive Trace Detection equipment available.

Purchasing the HI-SCAN 100100T-2is was ideal because of its ability to view individual pieces at multiple angles. This feature allows our security personnel to quickly identify possible threats, providing a more reliable inspection of tightly packaged or dense objects all in one process, thus shortening the inspection time. The 100100T-2is X-Ray is economical too. The cost of the machine allows us to provide reliable low-cost screening services to our clients in the air cargo community. Its size, ease of use and dual generators makes it ideal for our screening environment.

The IONSCAN 500DT provides us the detection technology we need. It is a key technology we utilize everyday. Its ability to detect a wide range of substances in a single analysis, gives us the ability to detect multiple threats with one instrument. It is the ideal choice for Explosive Trace Detection in the screening industry.

We look forward to working with Smiths Detection in the future to further enhance our screening capabilities.
